Note: An extended list includes 46 'lesser summits'. These exceptions regard mainly secondary summits or gendarmes which, even though they satisfy the topographic criterium, are part of other, well defined main summits, like the Grand Gerndarme of the Weissorn, or are of little significance like the nose of the Lyskamm. All other 4,000ers which do not meet the topographic criterium have been examined and considered according to the more subjective criteria (morphological, mountaineering).
